GS1 DataMatrix

Jedes Instrument wird mit GS1 DataMatrix Code mittels Speziallaser direktmarkiert (GTIN und LOT- oder Seriennummer).

Die Codierung erfüllt die regulatorischen FDA Anforderungen der UDI (Unique-Device-Identification).
Hierbei setzen wir auf einen validierten Kennzeichnungsprozess mit modernster Lasertechnologie. Diese ermöglicht eine korrosionsbeständige Markierung auf dem Instrument. Damit ist die Lesbarkeit der Markierung auf unseren Instrumenten über die gesamte Lebensdauer sichergestellt.

GS1 DataMatrix

Every instrument will be directly marked with the GS1 DataMatrix Code using a special laser (GTIN and LOT or serial number).

The coding also meets all regulatory FDA UDI (Unique-Device-Identification) requirements.
A validated marking process uses state of the art Laser technology which allows the application of a corrosion-proof pattern. This guarantees optimal traceability of the permanent readable marking over the complete durability of our instruments.

GS1 DataMatrix

Cada instrumento de marca directamente con un código de DataMatrix GS1 a través de un láser especial (GTIN y LOT o número de serie).

La codificación cumple los requisitos normativos FDA de UDI (Unique-Device-Identification). En este caso apostamos a un proceso de identificación validado con la más moderna tecnología láser. Esta posibilita un marcado sobre el instrumento resistente a la corrosión. De este modo está asegurada la legibilidad de la marcación en nuestros instrumentos a lo largo de toda su vida útil.

SUPERCUT Scheren

Bei SUPERCUT Scheren hat ein Blatt die Schneidengeometrie eines Messers, was einen mühelosen, messerartigen und glatten Schnitt ermöglicht.

Die Mikrozahnung am anderen Scherenblatt verhindert das Abgleiten des Gewebes.

SUPERCUT Scissors

SUPERCUT Scissors have one razor blade which allows an easy and clean cut.

The micro serration at the opposite blade prevents sliding off the tissue.

Tijeras SUPERCUT

Las tijeras SUPERCUT tienen una hoja geométrica cortante, lo que posibilita un corte liso y sin esfuerzo en el tejido.

El microdentado opuesto a la hoja lisa disminuye el deslizamiento del tejdo.

Forbici SUPERCUT

Le forbici SUPERCUT hanno una lama con sezione a coltello. Questo rende facile anche il taglio del tessuto meno delicato.

La microdentellatura nell'altra lama garantisce una presa sicura del tessuto da tagliare.

SCT Scheren

Bei SCT Scheren hat ein Blatt die Schneidengeometrie eines Messers, was einen mühelosen, messerartigen und glatten Schnitt ermöglicht.

SCT Scissors

SCT Scissors have one razor blade which allows an easy and clean cut.

Tijeras SCT

Las tijeras SCT tienen una hoja geométrica cortante, lo que posibilita un corte liso y sin esfuerzo en el tejido.

Forbici SCT

Le forbici SCT hanno una lama con sezione a coltello. Questo rende facile anche il taglio del tessuto meno delicato.

DLC COATING
DLC Beschichtung I DLC coating
Revestimiento de DLC I Rivestimento in DLC

DLC Beschichtungen

- Durch die elektro-physikalische Glättung wird die Gleitfähigkeit der Instrumente stark verbessert, was einen geringeren Abrieb und damit weniger Verschleiß zur Folge hat.
- Die außergewöhnliche Glätte führt zu einem leichten Gleiten der Scherenblätter auch bei höchster Beanspruchung.
- Dank der glatten Oberfläche wird die Reinigung der Scheren wesentlich erleichtert.
- Durch die Beschichtung erhöht sich die Oberflächenhärte um das 3-5 fache. Dies vervielfacht die Standzeit der Schneidekanten und macht die Instrumente äußerst kratzfest.
- Die Beschichtung ist in hohem Maße inert, d.h. die molekulare Bindung ist chemisch sehr widerstandsfähig. Dadurch werden unerwünschte Reaktionen beim Eintauchen in Lösungen oder bei der Sterilisation vermieden.
- Auch beim intensiven Einsatz in sauren oder basischen Lösungen bleibt die hohe Glätte der Oberfläche erhalten.
- Die inerte Beschichtung ist auch bei hohen Temperaturen stabil.

DLC coatings

- The glide quality of the instruments is considerably improved by electrophysical smoothing, resulting in less abrasion and reduced wear.
- The exceptional smoothness means that the scissor blades slide easily, even under maximum stress.
- The smooth surface makes the scissors much easier to clean.
- The coating makes the surface three to five times harder. This multiplies the lifetime of the cutting edges and makes the instruments extremely resistant to scratches and impacts.
- The coating is largely inert, which means that the molecular binding is very chemically resistant. This prevents undesirable reactions when the instruments are immersed in solutions or sterilised.
- Even under intensive use of acid or alkaline solutions, the high level of surface smoothness is retained.
- The inert coating is also stable at high temperatures.

Revestimiento de DLC

- El alisado electrofísico mejora considerablemente la capacidad de deslizamiento del instrumental, por lo que se produce menor abrasión y, en consecuencia, un desgaste más reducido.
- Gracias a su extraordinaria suavidad, las hojas de las tijeras se deslizan fácilmente, incluso en las condiciones más difíciles.
- Además, esta superficie lisa facilita también las operaciones de limpieza.
- Por otro lado, el revestimiento aumenta de tres a cinco veces la dureza de la superficie, lo que también alarga la duración de los cantos de corte y protege enormemente los instrumentos frente al rayado o a los golpes.
- El revestimiento es prácticamente inerte, es decir, el enlace molecular es químicamente resistente, lo que excluye la posibilidad de que se produzcan reacciones no deseadas al introducir las tijeras en ciertas disoluciones o esterilizarlas.
- La suavidad y lisura de la superficie se mantiene incluso con un uso intensivo en disoluciones ácidas o básicas.
- El revestimiento inerte también es estable a altas temperaturas.

Rivestimento in DLC

- La capacità allo scorrimento degli strumenti è notevolmente migliorata grazie alla levigatura elettro-fisica: ciò significa una ridotta abrasione e quindi una minore usura.
- L'eccezionale levigatura consente un agevole scorrimento delle lame della forbice anche nelle sollecitazioni più estreme.
- La pulizia delle forbici è notevolmente facilitata grazie alla superficie liscia.
- Il rivestimento aumenta la durezza della superficie di 3-5 volte. Ciò moltiplica la durata utile degli spigoli taglienti e rende gli strumenti estremamente resistenti ai graffi e agli urti.
- Il rivestimento è altamente interte, ciò significa che il legame molecolare è chimicamente molto resistente. Questo evita reazioni indesiderate durante l'immersione in soluzioni o nel corso dell'operazione di sterilizzazione.
- La grande levigatezza delle superfici non viene intaccata neanche con un uso intenso in soluzioni acide e basiche.
- Il rivestimento inerte è stabile anche ad alte temperature.

Gipsschere nach MICK

In Zusammenarbeit mit dem langjährig erfahrenen Gipspfleger Friedrich MICK haben wir eine Gipsschere für den Einsatz mit den heute gängigen Gips- und Kunststoffmaterialien entwickelt. Die besondere Ergonomie der Schere ist geeignet für ein ermüdungsfreies Arbeiten im Dauereinsatz. Durch die Unterteilung in ein Männer- und ein Frauenmodell ist die Gipsschere nach Mick für jeden Handtyp bestens geeignet.

- Hervorragende Kraftübertragung durch aktiven Einsatz aller Finger einer Hand
- Spezialvergütete Schnittfläche (Super Cut Schliff)
- Ergonomische Anpassung der Griffform
- Reinigungsfreundliche Hochglanzoberfläche

MICK Cast Scissors

In cooperation with Friedrich MICK, a male nurse with many years of experience in the care of orthopedic casts, we have developed cast scissors for use with plaster and plastic materials common today. Continuous, fatigue-free use is made possible by the special ergonomics of the scissors. Due to the classification into a men's and women's pattern, the MICK Cast Scissors are ideal for any type of hand.

- Excellent power transfer by actively using all fingers of one hand
- Specially hardened and tempered cutting surface (Super Cut)
- Shape of the handle ergonomically designed
- Easy-to-clean highly-polished surface

Tijeras para cortar yeso según MICK

Trabajando en colaboración con el experimentado experto en escayolas Friedrich MICK, hemos desarrollado unas tijeras concebidas para los materiales sintéticos y de escayola que se utilizan hoy en día. La perfecta ergonomía de estas tijeras permite trabajar de forma continua con ellas sin sentir fatiga. Además, como existe un modelo para hombres y uno para mujeres, las tijeras para cortar yeso según Mick se adaptan a la anatomía de cualquier mano.

- Magnífica transferencia de fuerza gracias al uso activo de todos los dedos de una mano.
- Superficie de corte con un tratamiento especial (afilado Supercut)
- Adaptación ergonómica de la forma del mango
- Superficie de alto brillo fáciles de limpiar

Forbici per gessi di MICK

Grazie alla collaborazione di Friedrich MICK, un gessista che vanta una lunga esperienza, abbiamo sviluppato una forbice per gessi adatta ai materiali sintetici ai gessi utilizzati attualmente. La particolare ergonomia delle forbici rende più semplice l'utilizzo prolungato. Grazie ai due modelli per uomo e donna, le forbici per gesso di Mick si adattano perfettamente a ogni tipo di mano.

- Eccellente trasmissione della forza mediante l'impiego di tutte le dita di una mano
- Superficie di taglio ottimizzata (Super Cut Schliff)
- Impugnatura ergonomica
- Superficie lucida per facilitare la pulizia

Fuss-Verbandschere nach MICK

Speziell für schwer zugängliche Stellen, z.B. Fussrücken, Ellenbogen und Handrücken wurde von Friedrich MICK die stark abgerundete Verbandschere für den Gipsspalt entwickelt. Die ergonomisch angepasste Biegung der Fuss- Verbandschere nach MICK in Verbindung mit dem SUPERCUT Schliff, ermöglicht ein problemloses Durchtrennen der Unterpolsterung bis zur letzten Faser.

- Spezialvergütete Schnittfläche (Super Cut Schliff)
- Reinigungsfreundliche Hochglanzoberfläche

MICK Foot Plaster Scissors

This strongly curved plaster scissors was especially developed from Friedrich MICK to reach hard accessible areas as such as dorsum of foot, elbow and back of the hand. The ergonomically curve of this MICK foot-plaster scissors in combination with the SUPERCUT feature allows the easy cut through of the full cushion.

- Specially hardened and tempered cutting surface (Super Cut)
- Easy-to-clean highly-polished surface

Tijeras para vendajes según MICK

Friedrich MICK ha desarrollado unas tijeras para vendajes fuertemente redondeadas que están concebidas específicamente para cortar escayolas en puntos de difícil acceso, como el dorso del pie, el codo y el dorso de la mano. La flexión ergonómicamente adaptada de la tijera para vendajes según MICK, en combinación con el afilado Supercut, permite cortar hasta la última fibra del relleno interior de la escayola.

- Superficie de corte con un tratamiento especial (afilado Supercut)
- Superficie de alto brillo fácil de limpiar

Forbici di MICK per bendaggi del piede

Sviluppate da Friedrich MICK in modo particolare per punti difficilmente accessibili, per esempio, il dorso del piede, il gomito e il dorso della mano, queste forbici per bendaggi sono molto smussate. La curvatura ergonomica della forbice di MICK per bendaggi del piede, insieme a al SUPERCUT Schliff, consentono il taglio dei materiali fino all'ultima fibra.

- Superficie di taglio ottimizzata (Super Cut Schliff)
- Superficie lucida per facilitare la pulizia
